

Bàrbara Forés

Negre

2020

WEATHER REPORT Autumn with good rains. Important anticyclone between late December and mid-January, with abundant fogs and night frosts. Gloria storm passed the week of January 20, with some damage. Dry February and very rainy spring. Dry summer without significant rains. The vine begins to sprout between the second and third week of March. At the beginning of April the whole vine is already sprouted. Between May 15 and May 30 the vineyard flowers and by mid-June the grapes are already pea-sized. Veraison at the end of July. We start the harvest on August 18. An abundant total rain of 702 liters. Rainy and humid year with mildew affectations that fortunately we were able to control.

VARIETIES Red Grenache (72%) and Carignan (28%). Organic and dry farming.
